U. S. Department of Agriculture

- - - -

We are offering a fine stock of gladiolus for the year 1938. Absolutely free from disease, you will find them true to name. If you are just getting into the raising of gladiolus and do not find yourself flush with money, I suggest you invest in the smaller sized bulbs and bulblets. These will make a good growth the first season and give greater increase than the larger sizes.

Our stock of bulbs has been in tight containers with Naphthalene flakes for a period of five weeks. If you wish to soak your bulbs before planting, use Bichloride of Mercury, (1 oz. to seven gallons of water) in a wooden container, soaking nine to twelve hours. This is poison and must be used with care; sure death to thrips.

You will note we are offering gladiolus in ten's and 100's. Twenty-five can be bought at the 100 rate. Bulbs will be shipped to destination by parcel post or express as requested. If sent parcel post, charges will be prepaid and C. O. D. transportation. This is our twentieth year in growing gladiolus. I believe our customers will say we have dealt fairly with every one. If you wish to pay one-fourth of any order, we can put up and save for you until wanted in the spring. This will insure a good selection.

Add sales tax if you are living in Ohio.

In the twenty years we have raised gladiolus we have placed several seedlings that have given splendid results. Several of these are in my list, such as Louise Smith, Harriet Tilton, Aureole, Justus F. and others.

The season of 1938 we are offering to the trade and gladiolus fans one which is a gem. This new seedling has not had any special attention but regular field grown care and many of the bloom, season of 1937, measured $6\frac{1}{2}$ inches in diameter. We have a fine stock of this seedling and for the year 1938 are offering to the public for the first time. Description as follows: "Peach and apricot shading to canary, with vermillion pencilings in the throat and violet anthers." Many bloom and of strong texture - average height, 3 ft. - straight stem. Is a great propagator, increasing very rapidly, perfectly free from disease, and many of the bulbs produced from thirty to fifty cormels from one bulb. We are offering these at \$1.00 each, known as No. 63.
